TECHNIK

Technik is a constructed typeface, which is almost strictly designed from basic geometrical elements consisting of mainly circles, also squares and diagonal shapes. Another characteristic is the connection of diagonals, verticals and diagonals, and also of some circle shapes touching each other at one point. It gives this type an original look, and prevents the problematic dark places in some letters. The technical feeling of the type (mainly in uppercase letters) is balanced by the design of lower-case which looks more friendly and fresh. Technik is not designed as a text typeface, it is recommended mainly for display typesetting. You can use it for example in fashion industry or in branding typography, or everywhere where you need the technical feeling of the constructed typefaces to look less cold and more friendly.

Technik typeface is designed in four weights, representing four font styles of the full type family. Names of styles are set by numbers, referring about the weight of the style. Technik-100 is the basic weight and the other weights like 25, 50 and 200 are the multiples of the basic one. This type does not include italics, but you can make your own slanted styles by skewing the font in a graphic application. Maximal recommended skew value is about 10%.

Technik 25

GEOMETRIA (z gréckych slov Geo = zem a metro = miera) je disciplína matematiky prvýkrát popularizovaná medzi starovekými Grékmi Tálesom (okolo 624 – 547 pred Kr.), ktorý sa zaoberal vzťahmi v priestore. Najstaršie známky geometrie sa dajú sledovať už v starovekom Egypte. Rindský papyrus popisuje zarážajúco presný spôsob výpočtu aproximácie čísla π , s chybou menšou ako jedna stotina. Rindský papyrus tiež popisuje jeden z prvých pokusov kvadratury kruhu, ako aj istú
